**NEW SERVICE
SPECIAL NOTICE**

On October 1, 2009 TIME CAPSULE VIDEO PRODUCTIONS will offer the following copy and duplication services to help preserve and archive all your irreplaceable family videos and the other special video tapes, as well as those all important 35mm slides, negatives and old pictures.

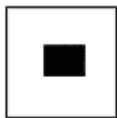

NOTE: Videotape is not an archival medium, it degrades yearly just sitting there. Videotapes made thirty years ago are barely playable today. Common videotapes recorded and played back on common VCRs may last about 15 years. There are some unknowns in this estimate; tape is made better than it used to be. It may last longer than 15 years but we won't know until enough time goes by to see how it survives. Are you willing to risk your special video tapes?

We digitally scan your slides & negative strips onto CD
